AABG Practice Lead

The Challenge

AABG FY26 Hackathon Challenge

Hackathon Challenge Statement

Build an **AI-powered Solution** on **AWS** that does not just make one person's job easier but fundamentally changes how **a Project Team** or the **Organisation** operates **at scale**, with **real impact**, and **built to last**.

Key Dates & Timeline

Hackathon Timeline

Ideation

13 – 17 Jul

Hack Period

20 Jul – 13 Aug

Submit Group Name

by 17 Jul

Showcase Day

14 Aug

Note that there will not be WBS provided on 14 Aug

Group Name Submission: by 17 July to AABG.committee@accenture.com

Showcase Date: 14 August 2026 | AWS Office, Singapore

Goals & Objectives

Goals & Objectives

Build Real, Scalable AI Solutions

Go beyond demos. Build AI-powered solutions on AWS that could deliver measurable organisational impact at scale.

Drive Organisational Transformation

Reimagine how teams operate. Solutions must address a team or org-level problem, not just one person's workflow.

Deepen AWS Practitioner Skills

Gain hands-on experience with AWS AI/GenAI — Bedrock, SageMaker, Connect, Lambda, Step Functions and more.

Built to Last

Solutions should be production-minded: secure, cost-aware, maintainable, and architecturally sound from day one.

Guidelines & Guardrails

Mission & Key Deliverables

Your Mission:

Design and build an AWS-native, AI-powered solution that transforms how a team or organisation operates with real functionality, deployed on AWS, within a \$100 USD budget anything beyond would be self paid.

Key Deliverables

-  Working prototype deployed on AWS
-  Architecture diagram showing AWS services used and how they connect
-  Business impact narrative: what changes, for whom, and at what scale
-  20 mins Presentation + 10 mins Q&A at Showcase, 14 August

Bonus Requirements

- Incorporate Responsible AI principles (bias, explainability, governance)
- Show cost optimization — AWS Cost Explorer screenshot or estimate
- Include a roadmap: what does v2 look like in 3 more months?

Guardrails — Stay On Track

AWS-Native Only

All infra and AI must run on AWS. No Azure, GCP, or direct third-party AI APIs. Open-source models hosted on AWS are fine.

\$100 USD Budget Cap

Teams get a \$100 AWS credit. Usage beyond this is self-funded.

Team-Level Impact Required

Your solution must solve a problem for a team or org, not just one individual. Personal productivity tools don't qualify.

No Hardcoded Credentials

Mandatory use of AWS Secrets Manager or IAM roles no hardcoded credentials.

Live Demo Required

Your solution must be deployed and demo-able on Showcase Day. Slides-only presentations without a prototype are not scored.

Scope the Problem Clearly

Scope your MVP to what is demonstrable in 4 weeks.

Judging Criteria

How You Will Be Scored

Business Impact & Relevance

25%

Does it solve a real, significant org-level problem? Is the impact measurable?

Technical Implementation

25%

Quality of working prototype. AWS service selection, architecture, and security.

Innovation & Creativity

20%

Application of AI/GenAI on AWS. Goes beyond standard templates.

Scalability & Feasibility

15%

Can the solution scale org-wide? Is it realistic to maintain and grow?

Cost Effectiveness

10%

Thoughtful AWS spend within budget. Demonstrates FinOps and right-sizing.

Sustainability

5%

Architectural choices that reduce overhead ie. serverless, efficient compute.

Mentoring & Support

Meet Your Mentors

Robbi

Teams 4, 5 & 9

Krishna

Teams 2, 6 & 12

Harry

Teams 3, 8 & 10

Naresh

Teams 1, 7 & 11

Session 1

Week 1 | 22–25 Jul

Ideation Validation

Validate your problem statement and proposed AI solution. Mentors challenge assumptions and sharpen your scope before you build.

Session 2

Week 3 | 4–8 Aug

Architecture Review

Review your AWS architecture, data flows, and cost estimates. Feedback on service selection, security posture, and gaps.

Session 3

Week 4 | 11–13 Aug

Pitch & Demo Dry-run

Run through your live demo and presentation. Mentors simulate judge questions so you arrive on Showcase Day confident.

Topic Suggestions

Suggested Hack Topics

These are starting points, not constraints. Your team can bring your own idea as long as it delivers org-level impact on AWS.

Cloud FinOps

AI-powered cloud cost visibility, anomaly detection, and rightsizing recommendations. Help teams understand and act on AWS spending in real time.

Account-Level Talent Management

Intelligent skill mapping, capacity planning, and role-matching across project accounts. Surface the right people for the right work at scale.

Project Delivery Agent for Managers

Agentic assistant that helps PMs draft deliverables, track milestones, flag risks, and generate status reports with Human-in-the-Loop approval.

Code Gen + Docs + Auto-Review (HITL)

Agents that generate code, documents, and perform first-level auto review (First pass review) before any human sees it, once done route to a human reviewer before merge.
